

South Muntenia Pre-assessment

Field	Question	Answer
intronote	<p>Welcome to the pre-assessment form for "Innovation Grants and Capacity Building for SMEs in the South-Muntenia region of Romania Pilot Call for Proposals"!</p> <p>The purpose of this pre-assessment form is to collect information to determine the participant's eligibility for the "Innovation Grants and Capacity Building for SMEs in the South-Muntenia region of Romania Pilot Call for Proposals" ("the Call"). Additionally, this pre-assessment form is used to collect information for the evaluation of this pilot call.</p> <p>If the participant wishes to apply for the Call, the participant must fill out the questions used to determine eligibility. These questions are marked as mandatory. After completing the survey, the participant will be notified in due time whether they are eligible and, if applicable, be invited to fill out the formal application to the Call.</p> <p>Since the Call is a pilot call including an evaluation study, the selection of eligible firms that are invited to fill out the formal application to the Call is randomized. That is, the information from the pre-assessment form is used to create a list of eligible firms. Then, a random sample of these eligible firms is selected to fill out the formal application to the Call. The randomization is necessary to be able to evaluate the pilot call.</p> <p>The goal of the evaluation study is to assess the effectiveness of of the grants on the creation of successful innovation projects by SMEs and the business outcomes and competitiveness of these SMEs. The information collected here will help to develop new policies and programs to support innovative activities of SMEs in South Muntenia.</p> <p>To learn more about the details of the Call and the evaluation study, please click on [link will be added here].</p> <p>This survey is being conducted by the RDA, the managing authority, and the World Bank.</p> <p>The survey should be filled by the founder/owner, CEO, or any other legal representative of the company.</p> <p>You can begin the survey now and continue at a later time using the same link in your internet browser.</p> <p>The survey is available in Romanian and English, to change the language, choose the preferred language in the menu bar above.</p> <p>The estimated time to complete this survey is [to be defined] minutes.</p> <p>Participation in the survey is voluntary and you can reach [name to be defined] by email [to be defined] in case of any doubt.</p>

Consent > Technology Readiness Level (TRL) of the Product/Service/Business Process of the Project										
trl_note	<p>The Technology Readiness Level (TRL) is defined as the point of reference for determining the development or maturity of a research and its readiness for the market uptake and potential investments.</p> <p>Below, we provide two examples.</p> <p>Example 1 from pharmy industry:</p> <p>Discovery Phase</p> <p>TRL 1: Findings reviewed - Scientific findings are reviewed and assessed as a foundation for characterizing new technologies.</p> <p>TRL 2: Research idea - Hypothesis are formed and preliminary studies are set to define parameters and to identify candidate concepts and/or therapeutic drugs.</p> <p>TRL 3: Design proof of concept - Testing the hypothesis and collecting data, limited in-vitro and in-vivo research models are carried out to set the initial proof of concept.</p> <p>Development Phase</p> <p>TRL 4: Demonstrate proof of concept - First preclinical studies, using animal models, to identify and assess the potential safety and toxicity problems, adverse events and side effects. Demonstrating proof-of-concept and safety of candidate drug formulations.</p> <p>TRL 5: Pilot drug produced - Pilot lots drug candidate are produced for further development, safety and toxicity studies in animal model systems are used and clinical protocols for Phase 1 clinical testing.</p> <p>TRL 6: Clinical trials - Phase 1 - Clinical trials are conducted to demonstrate the safety of candidate in a small number of humans.</p> <p>Demonstration Phase</p> <p>TRL 7: Clinical trials - Phase 2 - Clinical trials are conducted to demonstrate initial efficacy (preliminary evidence). Updated IND application, amended with a new clinical protocol to support phase 3 clinical trials or surrogate test plan submitted.</p> <p>TRL 8: New drug registration - Safety and effectiveness of the candidate drug are tested in Phase 3 clinical trials or surrogate tests. New drug application is prepared and submitted.</p> <p>Deployment Phase</p> <p>TRL 9: Drug distributed and marketed - The new pharmaceutical drug can be distributed and marketed. Phase 4 studies (safety surveillance) to support use in special populations and clinical trials are performed.</p> <p>Example 2 from ITC:</p> <p>Discovery Phase</p> <p>TRL 1: Define basic properties - Scientific research that is translated into applied activity, having paper studies of basic properties.</p> <p>TRL 2: Analytical study - The resulted applications are mainly speculative, with no proof of concept to support assumptions.</p> <p>TRL 3: Proof of concept - Active R&D activities, including analytical and laboratory studies to physically validate the previous analytical predictions and assumptions. First proof of concept.</p> <p>Development Phase</p> <p>TRL 4: Pre-prototype - The resulting system integrates basic technological components that work together in a low fidelity compared with the eventual system. The "pre-prototype" includes integration of ad hoc hardware in the laboratory environment.</p> <p>TRL 5: Pre-prototype tested in lab - Integration of components with reasonable and realistic supporting elements for testing in a simulated environment. High fidelity is achieved in laboratory.</p> <p>TRL 6: Prototype tested in relevant environment - Technology is tested in a relevant environment. It starts to be considered as a representative prototype to be tested in a high-fidelity laboratory environment or in a simulated operational environment.</p> <p>Demonstration Phase</p> <p>TRL 7: Approved prototype - Testing is moved to operational environments such as a vehicle or machines. This is the first</p>									

Field	Question	Answer																		
	<p>fully approved prototype.</p> <p>TRL 8: Pre-serial manufacturing - Technology is proven to work in its final form and under expected operational conditions. Tests and evaluation of the system are made in its intended or pre-production configuration. Design specifications, including quality and safety conditions along with operational suitability are evaluated. At this stage pre-serial manufacturing is intended to overcome any future mass production issues.</p> <p>Deployment Phase</p> <p>TRL 9: Product on the market - Technology is shaped in its actual application, meeting production configuration and under real conditions such as those identified during operational tests and evaluation.</p>
